The Government of Japan approved the 7th Strategic Energy Plan on Feb. 18 in 2025. One of the most important issues is achieving carbon neutrality by 2050 in Japan's energy policy. The 7th Strategic Energy Plan requires us to provide a concrete path to achieve this goal. On the other hand, new technologies related to carbon recycling are being implemented in society both in Japan and overseas. Therefore, in this symposium, we will discuss technologies related to carbon recycling and surrounding circumstances, focusing on global trends, trends in Japan, and regional trends centered on Kyoto.
